

A90-POE-1S Power Splitter

General Description

Westell's A90-POE-1S harnesses Power Over Ethernet (PoE) from a Westell Remote to power non-PoE devices at sites lacking readily available local DC power. This is useful to power an RMB-3 with a single Ethernet feed from a suitable host Remote unit without the need for separate power cabling or a fuse panel position. Another benefit arises when the A90-POE-1S is used with a dual-feed Remote platform (connected to distinct A/B DC power feeds). The powered load -- the RMB-3, for example -- is protected from failure of a single power feed at the site.

Measuring less than three inches square, the PoE splitter will fit almost anywhere and requires no configuration.

A90-POE-1S Power Splitter

Features:

- Input: 802.3af compliant PoE
- Output: 48V DC, 13.8W power, Non-PoE Ethernet
- Small form-factor
- Zero configuration
- No external power required
- Can power an RMB-3
