

# 3G/4G Repeater Modems

## General Information

Westell offers two different styles of modems to meet our customer's requirements for monitoring Westell digital repeaters. The modem serves as a gateway to the repeater and/or other device(s) that it connects to. It provides a virtual local connection to the repeater. The repeater can be polled, set up to send out SNMP traps and/or heartbeats, or both when connected to a modem that is properly configured. The modem itself can also be polled or set up to send out SNMP traps and/or heartbeats, or both.

All Westell modem kits include the following:

- Ethernet Cables
- Kit with 5 Port Switch includes Ethernet Cable, Coax Jumper Cables and 10dB Directional Coupler
- Installation CD/USB
- Frequencies covered include LTE + AWS

## Features

Item Number	CS11-469-420	CS11-469-421
Manufacturer's Description	Cradlepoint Modem IBR600LPE-VZ	Cradlepoint Modem IBR600LPE-VZ w/5 Port
Carrier	VZW Only	VZW Only
