

# Dual relay output SiteBus module

## General Description

The SBRELAY2 is a dual relay output module which can be connected to a SiteBus-equipped Westell Remote unit to provide expanded control output capacity. The two included Form-C (normally-open or normally-closed) relays can be used for triggering generators, signaling HVAC control systems, for parallel alarming applications in conjunction with other alarm monitoring devices, and for many other control applications. The compact DIN-rail mountable form-factor makes installation easy, and the ability to connect up to four modules to the same Westell Remote provides flexibility. The module requires no separate power or fusing, as all power and control signals are provided by the host Remote.

## Features:

- (2) Latching, Form-C Relay outputs
- 30VDC 1A / 125VAC .3A relay ratings
- DIN rail mountable in compact form-factor
- Compatible with Westell SiteBus on Remote RMX-4xxx, RMX-36xx/38xx, RMC-76x, and DMX-16xx
- Up to four SBRELAY2 modules can be connected to a single SiteBus port
- No separate power required

SBRELAY2 dual relay output SiteBus module

- Two RJ-45 ports with standard Westell SiteBus pinout for daisy chain connection(s) to other modules
- Modules may be installed up to 80 feet from the Remote
- Link and Alarm LEDs
